SQUEAK AND RATTLE TROUBLE DIAGNOSES

SYMPTOM DIAGNOSIS

Work Flow

Customer Interview

Duplicate the Noise and Test Drive.

Check Related Service Bulletins.

Locate the Noise and Identify the Root Cause.

Repair the Cause.

Confirm Repair.

OK

Inspection End

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to INT-11, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed descriptions or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.

- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping

- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.

- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/mostly clip or fastener/incorrect clearance.

- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.

- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.

- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.

- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.

- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.

- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE
If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on
the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to
duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to dupli-
cate the noise with the vehicle stopped by doing one or all of the following:
1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.
• Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
• If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the
  vehicle body.

CHECK RELATED SERVICE BULLETINS
After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related
to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE
1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool
   (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:
   • removing the components in the area that you suspect the noise is coming from.
     Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken
     or lost during the repair, resulting in the creation of new noise.
   • tapping or pushing/pulling the component that you suspect is causing the noise.
     Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only tem-
     porarily.
   • feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the
     noise.
   • placing a piece of paper between components that you suspect are causing the noise.
   • looking for loose components and contact marks.
   Refer to INT-9, “Generic Squeak and Rattle Troubleshooting”.

REPAIR THE CAUSE
• If the cause is a loose component, tighten the component securely.
• If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane
tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Depart-
ment.
CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.
NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be
ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 x 135 mm (3.94 x 5.31 in)/76884-71L01: 60 x 85 mm (2.36 x 3.35 in)/76884-
71L02:15 x 25 mm (0.59 x 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 x 50 mm (1.97 x 1.97 in)/73982-
50Y00: 10 mm (0.39 in) thick, 50 x 50 mm (1.97 x 1.97 in)
INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 x 50 mm (1.18 x 1.97 in)
FELT CLOTH TAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15  x  25 mm (0.59  x  0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll

The following materials, not found in the kit, can also be used to repair squeaks and rattles.

**UHMW (TEFLON) TAPE**
Insulates where slight movement is present. Ideal for instrument panel applications.

**SILICONE GREASE**
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.

**SILICONE SPRAY**
Use when grease cannot be applied.

**DUCT TAPE**
Use to eliminate movement.

**CONFIRM THE REPAIR**

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

**Generic Squeak and Rattle Troubleshooting**

Refer to Table of Contents for specific component removal and installation information.

**INSTRUMENT PANEL**

Most incidents are caused by contact and movement between:

1. Acrylic lens and combination meter housing
2. Instrument panel to front pillar finishers
3. Instrument panel to windshield
4. Instrument panel mounting pins
5. Wiring harnesses behind the combination meter
6. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicone spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

**CAUTION:**

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

**CENTER CONSOLE**

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

**DOORS**

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

**TRUNK**

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.

In addition look for:

1. Trunk lid bumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
**SQUEAK AND RATTLE TROUBLE DIAGNOSES**

4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

**SUNROOF/HEADLINING**

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

**OVERHEAD CONSOLE (FRONT AND REAR)**

Overhead console noises are often caused by the console panel clips not being engaged correctly. Most of these incidents are repaired by pushing up on the console at the clip locations until the clips engage.

In addition, look for:

1. Loose harness or harness connectors.
2. Front console map/reading lamp lens loose.
3. Loose screws at console attachment points.

**SEATS**

When isolating seat noise it’s important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

**UNDERHOOD**

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.
Dear Customer:
We are concerned about your satisfaction with your vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your vehicle right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

**SQUEAK & RATTLE DIAGNOSTIC WORKSHEET**

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.
SQUEAK AND RATTLE TROUBLE DIAGNOSES

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

☐ Anytime          ☐ After sitting out in the rain
☐ 1st time in the morning ☐ When it is raining or wet
☐ Only when it is cold outside ☐ Dry or dusty conditions
☐ Only when it is hot outside ☐ Other:

III. WHEN DRIVING:

☐ Through driveways
☐ Over rough roads
☐ Over speed bumps
☐ Only about ____ mph
☐ On acceleration
☐ Coming to a stop
☐ On turns: left, right or either (circle)
☐ With passengers or cargo
☐ Other: ____________________
☐ After driving ____ miles or ____ minutes

IV. WHAT TYPE OF NOISE

☐ Squeak (like tennis shoes on a clean floor)
☐ Creak (like walking on an old wooden floor)
☐ Rattle (like shaking a baby rattle)
☐ Knock (like a knock at the door)
☐ Tick (like a clock second hand)
☐ Thump (heavy muffled knock noise)
☐ Buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

Test Drive Notes:

____________________________________________________________

Vehicle test driven with customer
☐ No ☐ Yes
☐ Noise verified on test drive
☐ No ☐ Yes
☐ Noise source located and repaired
☐ No ☐ Yes
☐ Follow up test drive performed to confirm repair
☐ No ☐ Yes

PRECAUTIONS

PRECAUTION

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SR and SB section of this Service Manual.

WARNING:
• To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
• Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SR section.
• Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS

WARNING:
• When working near the Airbag Diagnosis Sensor Unit or other Airbag System sensors with the Ignition ON or engine running, DO NOT use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
• When using air or electric power tools or hammers, always switch the Ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

Precautions

• After removing and installing any opening/closing parts, make sure to perform all adjustments for proper operation.
• Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.
• When removing or disassembling any part, be careful not to damage or deform it. Protect parts which may get in the way with cloth.
• When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
• Keep removed parts protected with cloth.
• If a clip is deformed or damaged, replace it.
• If a non-reuseable part is removed, replace it with a new one.
• Tighten bolts and nuts firmly to the specified torque.
• After re-assembly has been completed, make sure each part functions correctly.
• Remove stains in the following manner:

<table>
<thead>
<tr>
<th>Water-Soluble stains</th>
<th>Oil stains</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dip a cloth in warm water, and squeeze tightly. After wiping the stain, wipe with a soft dry cloth.</td>
<td>Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water, then squeeze tightly. Clean off detergent completely, then wipe entire area with a soft dry cloth.</td>
</tr>
<tr>
<td>Do not use any organic solvent, such as a thinner or benzine to remove stains</td>
<td></td>
</tr>
</tbody>
</table>

Precautions Necessary for Steering Wheel Rotation after Battery Disconnect (Early
NOTE:
• Before removing and installing any control units, first turn the push-button ignition switch to the LOCK position, then disconnect both battery cables.
• After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
• Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If a DTC is detected, perform trouble diagnosis according to self-diagnosis results.
This vehicle is equipped with a push-button ignition switch and a steering lock unit. If the battery is disconnected or discharged, the steering wheel will lock and cannot be turned. If turning the steering wheel is required with the battery disconnected or discharged, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE
1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Carry the Intelligent Key or insert it to the key slot and turn the push-button ignition switch to ACC position. (At this time, the steering lock will be released.)
3. Disconnect both battery cables. The steering lock will remain released with both battery cables disconnected and the steering wheel can be turned.
4. Perform the necessary repair operation.
5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the push-button ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the push-button ignition switch is turned to LOCK position.)
6. Perform self-diagnosis check of all control units using CONSULT-III.

FRONT DOOR FINISHER

< ON-VEHICLE REPAIR >

REMOVAL

1. Release the pawls and remove step lamp lens/socket, then disconnect the connector.
2. Release the pawls at the rear edge and remove inside release handle escutcheon, then remove the screw.
3. Remove the front door grip cover (1).
   **CAUTION:**
   - Lift front door grip cover at the point shown or damage may occur to the pawls.
   - Lift up front door grip cover finisher to remove.

4. Remove the front door grip clip (A).

5. Lift up power window and door lock/unlock switch finisher starting at the rear of the switch, then disconnect the connectors.
6. Remove the front door finisher screw (A) under power window and door lock/unlock switch finisher.
7. Remove the front door grip screw (A).

8. Release the clips around outer edge, then remove front door finisher.
9. Disconnect the memory switch connector, if equipped.
10. Disconnect inside release handle and lock knob cables from back of front door finisher.
11. Release the pawls and remove the mirror cover.

Installation
Installation is in the reverse order of removal.

**CAUTION:**
To install the front door grip cover, start from the top and work down to the base.
REAR DOOR FINISHER

Exploded View

Removal and Installation

REAR DOOR FINISHER

Removal

1. Release the pawls and remove the step lamp/reflector lens, then disconnect the connector.
2. Release the pawls at the rear edge and remove inside release handle escutcheon, then remove the screw.
3. Release the pawls and lift up to remove the armrest finisher, then disconnect the rear door power window switch connector.
4. Remove the rear door finisher screws under the armrest finisher.
REAR DOOR FINISHER

< ON-VEHICLE REPAIR >

5. Release the clips around outer edge, then remove rear door finisher.

6. Disconnect inside release handle and lock knob cables from the back of rear door finisher.

Installation

Installation is in the reverse order of removal.
1. Front pillar finisher  
2. Dash side lower finisher  
3. Front kicking plate  
4. Front sill cover  
5. Center pillar lower finisher  
6. Rear sill cover  
7. Rear kicking plate  
8. Rear body side welt  
9. Rear pillar finisher
Removal and Installation

CAUTION:
• Wrap the tip of flat-bladed screwdriver with a cloth when removing metal clips from garnishes.
• When removing or installing body side welts, do not allow butyl seal to come in contact with pillar finishers.

REMOVAL

FRONT PILLAR FINISHER
1. Remove front body side welt.
2. Release the clips, then remove front pillar finisher.

CAUTION:
Insert a suitable clip removing tool wrapped with a shop cloth between the clip and the body side panel, then release the clip.

DASH SIDE LOWER FINISHER
1. Remove the front kicking plate.
2. Release the clips, then remove dash side lower finisher.

FRONT KICKING PLATE
Release the clip and pawls, then remove front kicking plate.

FRONT BODY SIDE WELT
1. Remove the center pillar lower finisher.
2. Remove the front kicking plate.
3. Release welt from the body opening, then remove front body side welt.

CENTER PILLAR LOWER FINISHER
1. Remove the front and rear kicking plate.
2. Release the clips and pawls, then remove center pillar lower finisher.
3. Remove the front and rear body side welt.

CENTER PILLAR UPPER FINISHER
1. Remove the screw cover, then remove the screw.
2. Remove front seat belt adjuster cover and shoulder anchor bolt. Refer to SB-7, "Exploded View".
3. Remove the center pillar lower finisher.
4. Release the clips, then remove center pillar upper finisher.

REAR KICKING PLATE
Release the clip and pawl, then remove rear kicking plate.

REAR BODY SIDE WELT
1. Remove the rear kicking plate.
2. Remove the center pillar lower finisher.
3. Release the welt from the body opening, then remove rear body side welt.

REAR PILLAR FINISHER
< ON-VEHICLE REPAIR >

1. Remove the rear body side welt.
2. Remove the screw cover, then remove the screw.
3. Release the clips, then remove rear pillar finisher.

SILL COVERS (FRONT/REAR)
Release the pawls, then remove the sill covers.

INSTALLATION
Installation is in the reverse order of removal.

CAUTION:
Make sure that clips are fully aligned with panel holes on body when installing, then press them in completely.
Removal and Installation

REMOVAL

1. Remove the halo upper frame assembly for bench seat or seat back for bucket seat. Refer to SE-112, "Removal and Installation" for bench seat (w/o climate controlled seats), or SE-110, "Removal and Installation" for bucket seat (w/o climate controlled seats), or SE-68, "Removal and Installation" for bucket seat (with climate controlled seats).
2. Remove high mounted stop lamp, if equipped. Refer to INT-24, "Removal and Installation".
3. Remove rear pillar finisher RH/LH. Refer to INT-24, "Removal and Installation".
4. Thread the rear seat belt RH/LH/center through vertical opening and release from rear parcel shelf finisher.
5. Release the clips, then remove rear parcel shelf finisher.

INSTALLATION

Installation is in the reverse order of removal.

CAUTION:
Make sure that clips are fully aligned with panel holes on body when installing, then press them in completely.
REAR SUNSHADE

Removal and Installation

1. Remove the rear parcel shelf finisher. Refer to INT-26, "Removal and Installation".
2. Remove the rear sunshade bolts, then disconnect the rear sunshade connector and remove the rear sunshade assembly.

INSTALLATION
Installation is in the reverse order of removal.
Removal and Installation

REMOVAL
1. Remove front seat (RH/LH). Refer to SE-107, "Removal and Installation" (w/o climate controlled seats) or SE-65, "Removal and Installation" (with climate controlled seats).
2. Remove the rear seat cushion. Refer to SE-112, "Removal and Installation" for bench seat (w/o climate controlled seats), or SE-110, "Removal and Installation" for bucket seat (w/o climate controlled seats), or SE-68, "Removal and Installation" for bucket seat (with climate controlled seats).
3. Remove lower body side trim. Refer to INT-24, "Removal and Installation".
4. Remove center console. Refer to IP-12, "Removal and Installation".
5. Remove the instrument stay assembly bracket nuts (A), then remove the instrument stay assembly bracket (1).

6. Remove the bracket.

7. Remove the parking brake cable bracket bolt, then position the parking brake cable aside.

8. Remove the connector duct (RH/LH) (2) and the center connector duct (1) from heater and cooling unit. Refer to VTL-10, "Exploded View".  
   • Vehicle front

9. Disconnect the drain hose (4) from the heater and cooling unit, then set aside.

10. Remove the three bolts (A) and one nut, then remove the bracket (3).

11. Detach the center console harness clips (A), then disconnect the electrical connectors (B) and position aside the center console harness (1).

12. Remove the parking brake cable nuts (A) and bolt, then remove the parking brake cable and position it aside.

13. Remove the yaw rate/side/decel G sensor. Refer to BRC-106, "Removal and Installation".

14. Remove the diagnosis sensor unit. Refer to SR-17, "Removal and Installation".
15. Remove the parking brake cable nuts (A), then position the parking brake cables (2) aside.
16. Remove the bracket nuts (B), then remove extension bracket (1) and center console rear bracket (3).
   • Vehicle front

17. Remove the CVT shift selector. Refer to TM-165, "Removal and Installation".
18. Remove the CVT shift selector bracket bolts (A), then remove the CVT shift selector bracket (1).

19. Remove front seat belt floor anchor bolt (RH/LH). Refer to SB-7, "Removal and Installation".
20. Release the tab, then remove floor mat hook.
22. Fold corners toward center, then remove floor carpet.

**INSTALLATION**
Installation is in the reverse order of removal.
CAUTION:
• Disconnect the negative and positive battery terminals and wait at least 3 minutes.

Removal and Installation

1. Rear assist grip
2. Front assist grip
3. Front room/map lamp assembly (dual panel-sunroof)
4. Sunvisor (RH)
5. Sunvisor (LH)
6. Mirror harness cover
7. Sunvisor cover
8. Front room/map lamp assembly
9. Sunvisor holder
10. Rear assist grip LH
11. Headlining assembly (single panel sunroof)
12. Headlining assembly (dual panel-sunroof)
A. Dual lock fastener
B. Sunroof clip
C. Screw
D. Metal clip
E. Magnets
F. Clip C101

Vehicle front
HEADLINING

• Be careful not to bend headlining during removal or installation.

REMOVAL

1. Recline the front seats to the fully reclined position.
2. Disconnect the negative and positive battery terminals, then wait at least 3 minutes.
3. Remove front pillar finisher (RH/LH). Refer to INT-24, "Removal and Installation".
4. Disconnect headlining harness and antenna feeder connectors.
5. Remove center pillar upper and rear pillar finishers. Refer to INT-24, "Removal and Installation".
6. Disconnect antenna amplifier and rear window defogger connectors.
7. Release the molded clip, then remove front and rear assist grips.

8. Remove the rear view mirror. Refer to MIR-19, "Removal and Installation".
9. Remove the sunvisor covers and screws, and then remove sunvisors (RH/LH).
10. Insert a suitable thin tool into the sunvisor holder notch and press in to release the locking tab.

   • Rotate sunvisor holder 90 degrees and pull away from headlining to remove.

11. Remove map lamp assembly.

   • Release the metal clips and lower front room/map lamp assembly away from headliner. Disconnect the front room/map lamp and sunroof switch connectors, then remove the front room/map lamp assembly.
12. Release dual lock fasteners around the sunroof opening and release the sunroof clip using a suitable tool.
13. Release the hidden clips near the rear edge of headliner using a suitable clip removal tool.
14. Drop headlining down and carefully rotate into position. Remove headlining through rear door opening.

CAUTION:

• When removing, two workers are required (one for each front and rear of headlining).
• Cover center console finisher upper surface with a shop cloth to prevent damage.

15. The following components are integral to the headliner and are repaired only as an assembly:

   • Personal lamp (LH/RH).
   • Roof harness assembly.
   • Antenna feeder assembly.
   • Dual lock attachments.

Revision: November 2009

INT-33
< ON-VEHICLE REPAIR >

INSTALLATION

Installation is in the reverse order of removal.
