< PRECAUTION >

PRECAUTION

PRECAUTIONS

Precautions for Trouble Diagnosis

CAUTION:
• Never apply 7.0 V or more to the measurement terminal.
• Use a tester with open terminal voltage of 7.0 V or less.
• Turn the ignition switch OFF and disconnect the battery cable from the negative terminal when checking the harness.

Precautions for Harness Repair

• Solder the repaired area and wrap tape around the soldered area.
  NOTE:
  A fray of twisted lines must be within 110 mm (4.33 in).

• Bypass connection is never allowed at the repaired area.
  NOTE:
  Bypass connection may cause CAN communication error. The spliced wire becomes separated and the characteristics of twisted line are lost.

• Replace the applicable harness as an assembly if error is detected on the shield lines of CAN communication line.
CAN COMMUNICATION SYSTEM

SYSTEM DESCRIPTION
CAN COMMUNICATION SYSTEM

System Description

- CAN communication is a multiplex communication system. This enables the system to transmit and receive large quantities of data at high speed by connecting control units with two communication lines (CAN-H and CAN-L).
- Control units on the CAN network transmit signals using the CAN communication control circuit. They receive only necessary signals from other control units to operate various functions.
- CAN communication lines adopt twisted-pair line style (two lines twisted) for noise immunity.

System Diagram

Each control unit passes an electric current to the termination circuits when transmitting CAN communication signal. The termination circuits produce an electrical potential difference between CAN-H and CAN-L. CAN communication system transmits and receives CAN communication signals by the potential difference.

</tr>
</tbody>
</table>

*: These are the only control units wired with both ends of CAN communication system.
Description

“Diag on CAN” is a diagnosis using CAN communication instead of previous DDL1 and DDL2 communication lines, between control units and diagnosis unit.

</tr>
</tbody>
</table>
**TROUBLE DIAGNOSIS**

**Condition of Error Detection**

DTC (e.g. U1000 and U1001) of CAN communication is indicated on SELF-DIAG RESULTS on CONSULT if a CAN communication signal is not transmitted or received between units for 2 seconds or more.

**CAN COMMUNICATION SYSTEM ERROR**

- CAN communication line open (CAN-H, CAN-L, or both)
- CAN communication line short (ground, between CAN communication lines, other harnesses)
- Error of CAN communication control circuit of the unit connected to CAN communication line

**WHEN DTC OF CAN COMMUNICATION IS INDICATED EVEN THOUGH CAN COMMUNICATION SYSTEM IS NORMAL**

- Removal/installation of parts: Error may be detected when removing and installing CAN communication unit and related parts while turning the ignition switch ON. (A DTC except for CAN communication may be detected.)
- Fuse blown out (removed): CAN communication of the unit may cease.
- Voltage drop: Error may be detected if voltage drops due to discharged battery when turning the ignition switch ON (Depending on the control unit which carries out CAN communication).
- Error may be detected if the power supply circuit of the control unit, which carries out CAN communication, malfunctions (Depending on the control unit which carries out CAN communication).
- Error may be detected if reprogramming is not completed normally.

**CAUTION:**

CAN communication system is normal if DTC of CAN communication is indicated on SELF-DIAG RESULTS of CONSULT under the above conditions. Erase the memory of the self-diagnosis of each unit.

**Symptom When Error Occurs in CAN Communication System**

In CAN communication system, multiple units mutually transmit and receive signals. Each unit cannot transmit and receive signals if any error occurs on CAN communication line. Under this condition, multiple control units related to the root cause malfunction or go into fail-safe mode.

**ERROR EXAMPLE**

**NOTE:**

- Each vehicle differs in symptom of each unit under fail-safe mode and CAN communication line wiring.
- Refer to LAN-20, "Abbreviation List" for the unit abbreviation.

Example: TCM branch line open circuit

```
Unit name  | Symptom                                                  
-----------|----------------------------------------------------------
ECM        | Engine torque limiting is affected, and shift harshness increases. 
BCM        | Reverse warning chime does not sound. 
```

Revision: August 2012
Example: Data link connector branch line open circuit

<table>
<thead>
<tr>
<th>Unit name</th>
<th>Symptom</th>
</tr>
</thead>
<tbody>
<tr>
<td>EPS control unit</td>
<td>Normal operation.</td>
</tr>
</tbody>
</table>
| Combination meter                            | • Shift position indicator and OD OFF indicator turn OFF.  
                                              | • Warning lamps turn ON.          |
| ABS actuator and electric unit (control unit)| Normal operation.                 |
| TCM                                           | No impact on operation.           |
| IPDM E/R                                      | Normal operation.                 |

**NOTE:**
- When data link connector branch line is open, transmission and reception of CAN communication signals are not affected. Therefore, no symptoms occur. However, be sure to repair malfunctioning circuit.
- The model (all units on CAN communication system are Diag on CAN) cannot perform CAN diagnosis with CONSULT if the following error occurs. The error is judged by the symptom.

<table>
<thead>
<tr>
<th>Unit name</th>

**TROUBLE DIAGNOSIS**

### < SYSTEM DESCRIPTION >

#### [CAN FUNDAMENTAL]

<table>
<thead>
<tr>
<th>Unit name</th>
<th>Symptom</th>
</tr>
</thead>
</table>
| ECM       | • Engine torque limiting is affected, and shift harshness increases.  
• Engine speed drops. |
| BCM       | • Reverse warning chime does not sound.  
• The front wiper moves under continuous operation mode even though the front wiper switch being in the intermittent position.  
• The room lamp does not turn ON.  
• The engine does not start (if an error or malfunction occurs while turning the ignition switch OFF.)  
• The steering lock does not release (if an error or malfunction occurs while turning the ignition switch OFF.) |
| EPS control unit | The steering effort increases. |
| Combination meter | • The tachometer and the speedometer do not move.  
• Warning lamps turn ON.  
• Indicator lamps do not turn ON. |
| ABS actuator and electric unit (control unit) | Normal operation. |
| TCM       | No impact on operation. |
| IPDM E/R  | When the ignition switch is ON,  
• The headlamps (Lo) turn ON.  
• The cooling fan continues to rotate. |

### CAN Diagnosis with CONSULT

CAN diagnosis on CONSULT extracts the root cause by receiving the following information.
- Response to the system call
- Control unit diagnosis information
- Self-diagnosis
- CAN diagnostic support monitor

#### Self-Diagnosis

If communication signals cannot be transmitted or received among units communicating via CAN communication line, CAN communication-related DTC is displayed on the CONSULT “Self Diagnostic Result” screen.

**NOTE:**
The following table shows examples of CAN communication-related DTC. For other DTC, refer to the applicable sections.

<table>
<thead>
<tr>
<th>DTC</th>
<th>Self-diagnosis item (CONSULT indication)</th>
<th>DTC detection condition</th>
<th>Inspection/Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>U1000</td>
<td>CAN COMM CIRCUIT</td>
<td>ECM</td>
<td>Start the inspection. Refer to the applicable section of the indicated control unit.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Except for ECM</td>
<td></td>
</tr>
<tr>
<td>U1001</td>
<td>CAN COMM CIRCUIT</td>
<td>When ECM is not transmitting or receiving CAN communication signal other than OBD (emission-related diagnosis) for 2 seconds or more.</td>
<td></td>
</tr>
<tr>
<td>U1002</td>
<td>SYSTEM COMM</td>
<td>When a control unit is not transmitting or receiving CAN communication signal for 2 seconds or less.</td>
<td></td>
</tr>
<tr>
<td>U1010</td>
<td>CONTROL UNIT(CAN)</td>
<td>When an error is detected during the initial diagnosis for CAN controller of each control unit.</td>
<td></td>
</tr>
</tbody>
</table>

### CAN Diagnostic Support Monitor

**MONITOR ITEM (CONSULT)**
### MONITOR ITEM (ON-BOARD DIAGNOSIS)

**NOTE:**
For some models, CAN communication diagnosis result is received from the vehicle monitor.

</table>

**NOTE:**
For some models, CAN communication diagnosis result is received from the vehicle monitor.
How to Use CAN Communication Signal Chart

The CAN communication signal chart lists the signals needed for trouble diagnosis. It is useful for detecting the root cause by finding a signal related to the symptom, and by checking transmission and reception unit.

<table>
<thead>
<tr>
<th>Item</th>
<th>Result indicated</th>
<th>Error counter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAN_COMM (Initial diagnosis)</td>
<td>OK</td>
<td>0</td>
<td>Normal at present</td>
</tr>
<tr>
<td></td>
<td>NG</td>
<td>1 – 50</td>
<td>Control unit error (The number indicates how many times diagnosis has been run.)</td>
</tr>
<tr>
<td>CAN_CIRC_1 (Transmission diagnosis)</td>
<td>OK</td>
<td>0</td>
<td>Normal at present</td>
</tr>
<tr>
<td></td>
<td>UNKWN</td>
<td>1 – 50</td>
<td>Unable to transmit for 2 seconds or more at present. (The number indicates how many times diagnosis has been run.)</td>
</tr>
<tr>
<td>CAN_CIRC_2 – 9 (Reception diagnosis of each unit)</td>
<td>OK</td>
<td>0</td>
<td>Normal at present</td>
</tr>
<tr>
<td></td>
<td>UNKWN</td>
<td>1 – 50</td>
<td>Unable to transmit for 2 seconds or more at present. (The number indicates how many times diagnosis has been run.) Diagnosis not performed.</td>
</tr>
</tbody>
</table>

Example: Tachometer does not move even though the engine rotates.

<table>
<thead>
<tr>
<th>Signal name/Connecting unit</th>

<tr>
<td>Sleep/wake up signal</td>
<td>T</td>
<td></td>
<td></td>
<td></td>
<td>R</td>
<td></td>
</tr>
</tbody>
</table>

It indicates that an error occurs between ECM and M&A (Shaded area).

No communication between ECM and M&A.
INTERVIEW WITH CUSTOMER

Interview with the customer is important to detect the root cause of CAN communication system errors and to understand vehicle condition and symptoms for proper trouble diagnosis.

Points in interview
- What: Parts name, system name
- When: Date, Frequency
- Where: Road condition, Place
- In what condition: Driving condition/environment
- Result: Symptom

NOTE:
- Check normal units as well as error symptoms.
- Example: Circuit between ECM and the combination meter is judged normal if the customer indicates tachometer functions normally.
- When a CAN communication system error is present, multiple control units may malfunction or go into fail-safe mode.
DIAGNOSIS AND REPAIR WORKFLOW

< BASIC INSPECTION >

[CAN FUNDAMENTAL]

- Indication of the combination meter is important to detect the root cause because it is the most obvious to the customer, and it performs CAN communication with many units.

INSPECTION OF VEHICLE CONDITION
Check whether the symptom is reproduced or not.

NOTE:
Do not turn the ignition switch OFF or disconnect the battery cable while reproducing the error. The error may temporarily correct itself, making it difficult to determine the root cause.

CHECK OF CAN SYSTEM TYPE (HOW TO USE CAN SYSTEM TYPE SPECIFICATION CHART)
Determine CAN system type based on vehicle equipment.

NOTE:
- This chart is used if CONSULT does not automatically recognize CAN system type.
- There are two styles for CAN system type specification charts. Depending on the number of available system types, either style A or style B may be used.

CAN System Type Specification Chart (Style A)

NOTE:
CAN system type is easily checked with the vehicle equipment identification information shown in the chart.

**CAN System Type Specification Chart**

<table>
<thead>
<tr>
<th>Body type</th>
<th>Wagon</th>
<th>2WD</th>
<th>AWD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine</td>
<td>QR25DE</td>
<td>VQ35DE</td>
<td></td>
</tr>
<tr>

<td>CAN system type</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>CAN communication signal chart</td>
<td>XX-XX - &quot;TYPE 1/TYPE 2&quot;</td>
<td>XX-XX - &quot;TYPE 3/TYPE 4&quot;</td>
<td>XX-XX - &quot;TYPE 5/TYPE 6&quot;</td>
</tr>
</tbody>
</table>

**NOTE:**

Check the vehicle equipment with the vehicle identification number plate. The number indicates the CAN system type of the vehicle.

**VEHICLE EQUIPMENT IDENTIFICATION INFORMATION**

**NOTE:**

Check CAN system type from the vehicle shape and equipment.

**With VDC**

- VDC OFF switch

**With Intelligent Key system**

- Ignition knob

In the above example, • Checking VDC OFF switch leads to judge whether or not VDC is equipped.

• Checking the ignition knob leads to judge whether or not Intelligent Key system is equipped.

For the above case, CAN system type is "6"
CAN system type is easily checked with the vehicle equipment identification information shown in the chart.

**EXAMPLE:**
Vehicle is equipped as follows: Sedan, 2WD, MR20DE, CVT, ABS, Active AFS, Intelligent Key system, Navigation system and Automatic drive positioner. ( ) shows an example of CAN system type.

### CAN System Specification Chart
**Refer to the specification as shown in the chart.**

<table>
<thead>
<tr>
<th>Body type</th>
<th>Sedan</th>
<th>2WD</th>
<th>AWD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Axle</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Engine</td>
<td>HR1DE</td>
<td>MR20DE</td>

<td></td>
<td></td>
</tr>
<tr>
<td>CAN communication signal chart</td>
<td>XXX</td>
<td>XXX</td>
<td>XXX</td>
</tr>
</tbody>
</table>

* : Applicable

### VEHICLE EQUIPMENT IDENTIFICATION INFORMATION
**NOTE:** Check CAN system type from the vehicle shape and equipment.

- **With active AFS**
  - Bending lamp
  - Xenon bulb

- **With Intelligent Key system**
  - Ignition knob

- **With Navigation system**
  - Display
  - Multifunction switch

- **With Automatic drive positioner**
  - Seat memory switch

In the above example:
- Checking Xenon bulb and bending lamp lead to judge whether or not Active AFS is equipped.
- Checking the ignition knob leads to judge whether or not Intelligent Key system is equipped.
- Checking display and multifunction switch lead to judge whether or not Navigation system is equipped.
- Checking seat memory switch leads to judge whether or not Automatic drive positioner is equipped.

*For the above case, CAN system type is 20.*

### CREATE INTERVIEW SHEET
Fill out the symptom described by the customer, vehicle condition, and CAN system type on the interview sheet.
**CAN Communication System Diagnosis Interview Sheet**

Date received: 3, Feb. 2006

Type: DBA-KG11

VIN No.: KG11-005040

Model: BDRARGZ397EDA-E-J-

First registration: 10, Jan. 2001

Mileage: 62,140

CAN system type: Type 19

Symptom (Results from interview with customer)

- Headlamps suddenly turn ON while driving the vehicle.
- The engine does not restart after stopping the vehicle and turning the ignition switch OFF.
- The cooling fan continues rotating while turning the ignition switch ON.

Condition at inspection

Error Symptom: **Present**/Past

The engine does not start. While turning the ignition switch ON,
- The headlamps (Lo) turn ON, and the cooling fan continues rotating.
- The interior lamp does not turn ON.

**DETECT THE ROOT CAUSE**

CAN diagnosis function of CONSULT detects the root cause.
HOW TO USE THIS MANUAL

Caution

- This section describes information peculiar to a vehicle and inspection procedures.
- For trouble diagnosis procedure, refer to LAN-15, "Trouble Diagnosis Procedure".

Abbreviation List

Unit name abbreviations in CONSULT CAN diagnosis and in this section are as per the following list.

</tbody>
</table>
The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the “SRS AIR BAG” and “SEAT BELT” of this Service Manual.

**WARNING:**
Always observe the following items for preventing accidental activation.

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see “SRS AIR BAG”.
- Never use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

**PRECAUTIONS WHEN USING POWER TOOLS (AIR OR ELECTRIC) AND HAMMERS**

**WARNING:**
Always observe the following items for preventing accidental activation.

- When working near the Air Bag Diagnosis Sensor Unit or other Air Bag System sensors with the ignition ON or engine running, never use air or electric power tools or strike near the sensor(s) with a hammer. Heavy vibration could activate the sensor(s) and deploy the air bag(s), possibly causing serious injury.
- When using air or electric power tools or hammers, always switch the ignition OFF, disconnect the battery, and wait at least 3 minutes before performing any service.

**Precautions for Trouble Diagnosis**

**CAUTION:**
- Never apply 7.0 V or more to the measurement terminal.
- Use a tester with open terminal voltage of 7.0 V or less.
- Turn the ignition switch OFF and disconnect the battery cable from the negative terminal when checking the harness.

**Precautions for Harness Repair**

- Solder the repaired area and wrap tape around the soldered area. **NOTE:**
  A fray of twisted lines must be within 110 mm (4.33 in).
• Bypass connection is never allowed at the repaired area.  
  **NOTE:**  
  Bypass connection may cause CAN communication error. The spliced wire becomes separated and the characteristics of twisted line are lost.

• Replace the applicable harness as an assembly if error is detected on the shield lines of CAN communication line.

MAIN LINE BETWEEN ADP AND DLC CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector B1
   - Harness connector M6

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - Harness connectors B208 and B32
   - Harness connectors B1 and M6
2. Check the continuity between the harness connectors.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>B32</td>
<td>9</td>
<td>B1</td>
</tr>
<tr>
<td></td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair the main line between the harness connectors B32 and B1.

3. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

Check the continuity between the harness connector and the data link connector.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Data link connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M6</td>
<td>15J</td>
<td>M22</td>
</tr>
<tr>
<td></td>
<td>16J</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the driver seat control unit and the data link connector.
NO >> Repair the main line between the harness connector M6 and the data link connector.
MAIN LINE BETWEEN DLC AND HVAC CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

MAIN LINE BETWEEN DLC AND HVAC CIRCUIT

Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>

<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?
YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the data link connector and the A/C auto amp.
NO   >> Repair the main line between the data link connector and the A/C auto amp.
MAIN LINE BETWEEN HVAC AND ABS CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector M1
   - Harness connector E30

Is the inspection result normal?
YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
2. Check the continuity between the A/C auto amp. harness connector and the harness connector.

<table>
<thead>
<tr>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the A/C auto amp. and the air bag diagnosis sensor unit.

NO >> Repair the main line between the A/C auto amp. and the air bag diagnosis sensor unit.
MAIN LINE BETWEEN A-BAG AND ABS CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

MAIN LINE BETWEEN A-BAG AND ABS CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector M1
   - Harness connector E30

Is the inspection result normal?

YES >> GO TO 2.
NO    >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
2. Check the continuity between the A/C auto amp. harness connector and the harness connector.

---

A/C auto amp. harness connector | Harness connector | Continuity
-----------------------------------|-----------------|----------
Connector No. | Terminal No. | Connector No. | Terminal No. | Existed
M37           | 1            | M1            | 15G         | Existed
              | 2            |               | 8G          | Existed

Is the inspection result normal?

YES >> GO TO 3.
NO    >> Repair the main line between the air bag diagnosis sensor unit and the harness connector M1.

3. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the continuity between the harness connector and the ABS actuator and electric unit (control unit) harness connector.

---

Harness connector | ABS actuator and electric unit (control unit) harness connector | Continuity
------------------|---------------------------------------------------------------|----------
Connector No. | Terminal No. | Connector No. | Terminal No. | Existed
E30             | 15G          | E26           | 26           | Existed
              | 8G           |               | 15           | Existed

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the air bag diagnosis sensor unit and the ABS actuator and electric unit (control unit).
NO    >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Models without automatic drive positioner
     • ECM
     • Harness connector E30
     • Harness connector M1
   - Models with automatic drive positioner
     • ECM
     • Harness connector E29
     • Harness connector B10

Is the inspection result normal?
- YES >> GO TO 2.
- NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E10</td>
<td>98</td>
<td>97</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
- YES >> GO TO 3.
- NO >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".

Is the inspection result normal?
- YES (Present error)>>Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".
- YES (Past error)>>Error was detected in the ECM branch line.
- NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Driver seat control unit
   - Harness connector B208
   - Harness connector B32

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of driver seat control unit.
2. Check the resistance between the driver seat control unit harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>B203</td>
<td>16</td>
<td>32</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES  >> GO TO 3.
NO   >> Repair the driver seat control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the driver seat control unit. Refer to ADP-48, "DRIVER SEAT CONTROL UNIT : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>> Replace the driver seat control unit. Refer to ADP-171, "Removal and Installation".
YES (Past error)>> Error was detected in the driver seat control unit branch line.
NO   >> Repair the power supply and the ground circuit.
BCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?
YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".
YES (Past error)>>Error was detected in the BCM branch line.
NO >> Repair the power supply and the ground circuit.
DLC BRANCH LINE CIRCUIT

DLC BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the data link connector for damage, bend and loose connection (connector side and harness side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check the resistance between the data link connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the data link connector branch line circuit.
NO >> Repair the data link connector branch line.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the combination meter for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of combination meter.
2. Check the resistance between the combination meter harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".
YES (Past error)>>Error was detected in the combination meter branch line.
NO >> Repair the power supply and the ground circuit.
AV BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the AV control unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of AV control unit.
2. Check the resistance between the AV control unit harness connector terminals.
   - Models without navigation system
   - Models with navigation system

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M156</td>
<td>86</td>
<td>87</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the AV control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the AV control unit. Refer to the following.
- Models with BOSE audio with color display: AV-232, "AV CONTROL UNIT : Diagnosis Procedure"
- Models with BOSE audio with color display with navigation system: AV-412, "AV CONTROL UNIT : Diagnosis Procedure"

Is the inspection result normal?

YES (Present error)>>Replace the AV control unit. Refer to the following.
   - Models with BOSE audio with color display: AV-322, "Removal and Installation"
   - Models with BOSE audio with color display with navigation system: AV-490, "Removal and Installation"

YES (Past error)>>Error was detected in the AV control unit branch line.
NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the A/C auto amp. for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of A/C auto amp.
2. Check the resistance between the A/C auto amp. harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>2</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the A/C auto amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.
• Models with color display: HAC-60, "A/C AUTO AMP : Diagnosis Procedure"
• Models with monochrome display: HAC-168, "A/C AUTO AMP : Diagnosis Procedure"

Is the inspection result normal?
YES (Present error)>>Replace the A/C auto amp. Refer to the following.
  • Models with color display: HAC-104, "Removal and Installation"
  • Models monochrome display: HAC-211, "Removal and Installation"
YES (Past error)>>Error was detected in the A/C auto amp. branch line.
NO >> Repair the power supply and the ground circuit.
< DTC/CIRCUIT DIAGNOSIS >

**STRG BRANCH LINE CIRCUIT**

Diagnosis Procedure

1. **CHECK CONNECTOR**
   
   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

   Is the inspection result normal?
   
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. **CHECK HARNESS FOR OPEN CIRCUIT**
   
   1. Disconnect the connector of steering angle sensor.
   2. Check the resistance between the steering angle sensor harness connector terminals.

   Is the measurement value within the specification?
   
   YES >> GO TO 3.
   NO >> Repair the steering angle sensor branch line.

3. **CHECK POWER SUPPLY AND GROUND CIRCUIT**
   
   Check the power supply and the ground circuit of the steering angle sensor. Refer to BRC-85, "Wiring Diagram".

   Is the inspection result normal?
   
   YES (Present error)>>Replace the steering angle sensor. Refer to BRC-109, "Removal and Installation".
   YES (Past error)>>Error was detected in the steering angle sensor branch line.
   NO >> Repair the power supply and the ground circuit.

A-BAG BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

A-BAG BRANCH LINE CIRCUIT

Diagnosis Procedure

WARNING:
Always observe the following items for preventing accidental activation.
• Before servicing, turn ignition switch OFF, disconnect battery negative terminal, and wait 3 minutes or more. (To discharge backup capacitor.)
• Never use unspecified tester or other measuring device.

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the air bag diagnosis sensor unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Replace the main harness.

2. CHECK AIR BAG DIAGNOSIS SENSOR UNIT

Check the air bag diagnosis sensor unit. Refer to SRC-3, "Work Flow".

Is the inspection result normal?
YES >> Replace the main harness.
NO >> Replace parts whose air bag system has a malfunction.
ABS BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ABS actuator and electric unit (control unit) for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES  >> GO TO 2.
NO  >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the resistance between the ABS actuator and electric unit (control unit) harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E26</td>
<td>26</td>
<td>15</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES  >> GO TO 3.
NO  >> Repair the ABS actuator and electric unit (control unit) branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ABS actuator and electric unit (control unit). Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?
YES (Present error)>>Replace the ABS actuator and electric unit (control unit). Refer to BRC-106, "Exploded View".
YES (Past error)>>Error was detected in the ABS actuator and electric unit (control unit) branch line.
NO  >> Repair the power supply and the ground circuit.
< DTC/CIRCUIT DIAGNOSIS >

TCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - TCM
   - Harness connector F1
   - Harness connector E3

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of TCM.
2. Check the resistance between the TCM harness connector terminals.

<table>
<thead>
<tr>
<th>TCM harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>F15</td>
<td>32</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the TCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to TM-120, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the TCM. Refer to TM-162, "Exploded View".
YES (Past error)>>Error was detected in the TCM branch line.
NO >> Repair the power supply and the ground circuit.
IPDM-E BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

DIAGNOSIS PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
YES (Past error)>>Error was detected in the IPDM E/R branch line.
NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>M22</td>
<td>6</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES  >> GO TO 3.
NO   >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>Ground</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>

</tr>
<tr>
<td></td>
<td>14</td>
<td>Not existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES  >> GO TO 4.
NO   >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

<table>
<thead>
<tr>
<th>ECM</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal No.</td>
<td>98</td>
</tr>
</tbody>
</table>

3. Check the resistance between the IPDM E/R terminals.

<table>
<thead>
<tr>
<th>IPDM E/R</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal No.</td>
<td>40</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES  >> GO TO 5.
NO   >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
< DTC/CIRCUIT DIAGNOSIS >

CAN COMMUNICATION CIRCUIT

[CAN]

Inspection result
Reproduced>>GO TO 6.
Non-reproduced>>Start the diagnosis again. Follow the trouble diagnosis procedure when past error is detected.

6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.
1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   NOTE:
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
   NOTE:
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

Inspection result
Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
DIAGNOSIS PROCEDURE

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>A/C auto amp. harness connector</th>
<th>Continuity</th>

</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>M37</td>
</tr>
<tr>
<td></td>
<td>14</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the data link connector and the A/C auto amp.
NO >> Repair the main line between the data link connector and the A/C auto amp.
## Diagnosis Procedure

**1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)**

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
4. Check the continuity between the harness connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>A/C auto amp. harness connector</th>

<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>M1</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

- **YES** (Present error)>>Check CAN system type decision again.
- **YES** (Past error)>>Error was detected in the main line between the A/C auto amp. and the air bag diagnosis sensor unit.
- **NO**  >> Repair the main line between the A/C auto amp. and the air bag diagnosis sensor unit.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector M1
   - Harness connector E30

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
2. Check the continuity between the A/C auto amp. harness connector and the harness connector.

<table>
<thead>
<tr>
<th>A/C auto amp. harness connector</th>

</tr>
</thead>
<tbody>
<tr>
<td>E30</td>
<td>15G</td>
<td>E26</td>
</tr>
<tr>
<td></td>
<td>8G</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the air bag diagnosis sensor unit and the ABS actuator and electric unit (control unit).
NO   >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Models without automatic drive positioner
     • ECM
     • Harness connector E30
     • Harness connector M1
   - Models with automatic drive positioner
     • ECM
     • Harness connector E29
     • Harness connector B10

Is the inspection result normal?

| YES | >> GO TO 2. |
| NO  | >> Repair the terminal and connector. |

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>

<tr>
<td></td>
<td></td>
<td>Approx. 108 – 132</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

| YES | >> GO TO 3. |
| NO  | >> Repair the ECM branch line. |

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".

Is the inspection result normal?

| YES (Present error) | >> Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description". |
| YES (Past error)    | >> Error was detected in the ECM branch line. |
| NO                  | >> Repair the power supply and the ground circuit. |
BCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 1)]

BCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.

NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".

YES (Past error)>>Error was detected in the BCM branch line.

NO >> Repair the power supply and the ground circuit.

<table>
<thead>
<tr>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".
YES (Past error)>>Error was detected in the combination meter branch line.
NO >> Repair the power supply and the ground circuit.
**Diagnosis Procedure**

1. **CHECK CONNECTOR**

   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the terminals and connectors of the A/C auto amp. for damage, bend and loose connection (unit side and connector side).

   **Is the inspection result normal?**
   - **YES** >> GO TO 2.
   - **NO** >> Repair the terminal and connector.

2. **CHECK HARNESS FOR OPEN CIRCUIT**

   1. Disconnect the connector of A/C auto amp.
   2. Check the resistance between the A/C auto amp. harness connector terminals.

   **Is the measurement value within the specification?**
   - **YES** >> GO TO 3.
   - **NO** >> Repair the A/C auto amp. branch line.

3. **CHECK POWER SUPPLY AND GROUND CIRCUIT**

   Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.
   - Models with color display: HAC-60, "A/C AUTO AMP. : Diagnosis Procedure"
   - Models with monochrome display: HAC-168, "A/C AUTO AMP. : Diagnosis Procedure"

   **Is the inspection result normal?**
   - **YES (Present error)>>**Replace the A/C auto amp. Refer to the following.
     - Models with color display: HAC-104, "Removal and Installation"
     - Models monochrome display: HAC-211, "Removal and Installation"
   - **YES (Past error)>>**Error was detected in the A/C auto amp. branch line.
   - **NO** >> Repair the power supply and the ground circuit.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to TM-120, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the TCM. Refer to TM-162, "Exploded View".
YES (Past error)>>Error was detected in the TCM branch line.
NO >> Repair the power supply and the ground circuit.
IPDM-E BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 1)]

IPDM-E BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

Is the inspection result normal?
YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
YES (Past error)>>Error was detected in the IPDM E/R branch line.
NO >> Repair the power supply and the ground circuit.

</tr>
<tr>
<td></td>
<td>39</td>
</tr>
<tr>
<td></td>
<td>Approx. 108 – 132</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

- YES >> GO TO 5.
- NO >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
Inspection result

Reproduced>>GO TO 6.
Non-reproduced>>Start the diagnosis again. Follow the trouble diagnosis procedure when past error is detected.

6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.
1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   NOTE:
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the "Symptom (Results from interview with customer)" are reproduced.
   NOTE:
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

Inspection result

Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
DTC/CIRCUIT DIAGNOSIS
MAIN LINE BETWEEN ADP AND DLC CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector B1
   - Harness connector M6

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - Harness connectors B208 and B32
   - Harness connectors B1 and M6
2. Check the continuity between the harness connectors.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>B32</td>
<td>9</td>
<td>B1</td>
</tr>
<tr>
<td></td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?
YES >> GO TO 3.
NO >> Repair the main line between the harness connectors B32 and B1.

3. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

Check the continuity between the harness connector and the data link connector.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Data link connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M6</td>
<td>15J</td>
<td>M22</td>

<td>16J</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?
YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the driver seat control unit and the data link connector.
NO >> Repair the main line between the harness connector M6 and the data link connector.
Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>

</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the air bag diagnosis sensor unit and the ABS actuator and electric unit (control unit).
NO >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
ECM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

ECM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Models without automatic drive positioner
     • ECM
     • Harness connector E30
     • Harness connector M1
   - Models with automatic drive positioner
     • ECM
     • Harness connector E29
     • Harness connector B10

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>ECM harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>E10</td>
<td>98</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES  >> GO TO 3.
NO   >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".
YES (Past error)>>Error was detected in the ECM branch line.
NO   >> Repair the power supply and the ground circuit.
ADP BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR
   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the following terminals and connectors for damage, bend and loose connection (unit side and con-
      nector side).
      - Driver seat control unit
      - Harness connector B208
      - Harness connector B32

   Is the inspection result normal?
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT
   1. Disconnect the connector of driver seat control unit.
   2. Check the resistance between the driver seat control unit harness connector terminals.

<table>
<thead>
<tr>
<th>Driver seat control unit harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>B203</td>
<td>16</td>
</tr>
</tbody>
</table>

   Is the measurement value within the specification?
   YES >> GO TO 3.
   NO >> Repair the driver seat control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

   Check the power supply and the ground circuit of the driver seat control unit. Refer to ADP-48, "DRIVER SEAT
   CONTROL UNIT : Diagnosis Procedure".

   Is the inspection result normal?
   YES (Present error)>>Replace the driver seat control unit. Refer to ADP-171, "Removal and Installation".
   YES (Past error)>>Error was detected in the driver seat control unit branch line.
   NO >> Repair the power supply and the ground circuit.
BCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 2)]

BCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?
YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".
YES (Past error)>>Error was detected in the BCM branch line.
NO >> Repair the power supply and the ground circuit.
DLC BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

DLC BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the data link connector for damage, bend and loose connection (connector side and harness side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check the resistance between the data link connector terminals.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>M22</td>
<td>6</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the data link connector branch line circuit.
NO >> Repair the data link connector branch line.
M&A BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the combination meter for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of combination meter.
2. Check the resistance between the combination meter harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".
YES (Past error)>>Error was detected in the combination meter branch line.
NO >> Repair the power supply and the ground circuit.

Combination meter harness connector

<table>

Revision: August 2012
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the A/C auto amp. for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of A/C auto amp.
2. Check the resistance between the A/C auto amp. harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>2</td>
</tr>
</tbody>
</table>

Approx. 54 – 66

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the A/C auto amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.

- Models with color display: HAC-60, "A/C AUTO AMP. : Diagnosis Procedure"
- Models with monochrome display: HAC-168, "A/C AUTO AMP. : Diagnosis Procedure"

Is the inspection result normal?

YES (Present error)>>Replace the A/C auto amp. Refer to the following.
- Models with color display: HAC-104, "Removal and Installation"
- Models monochrome display: HAC-211, "Removal and Installation"

YES (Past error)>>Error was detected in the A/C auto amp. branch line.
NO >> Repair the power supply and the ground circuit.
1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of steering angle sensor.
2. Check the resistance between the steering angle sensor harness connector terminals.

<table>
<thead>
<tr>
<th>Steering angle sensor harness connector</th>
<th>Resistance (Ω)</th>

<td>Terminal No.</td>
</tr>
<tr>
<td>M53</td>
<td>5</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the steering angle sensor branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the steering angle sensor. Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?
YES (Present error)>>Replace the steering angle sensor. Refer to BRC-109, "Removal and Installation".
YES (Past error)>>Error was detected in the steering angle sensor branch line.
NO >> Repair the power supply and the ground circuit.
A-BAG BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

A-BAG BRANCH LINE CIRCUIT

Diagnosis Procedure

**WARNING:**
Always observe the following items for preventing accidental activation.
• Before servicing, turn ignition switch OFF, disconnect battery negative terminal, and wait 3 minutes or more. (To discharge backup capacitor.)
• Never use unspecified tester or other measuring device.

1. **CHECK CONNECTOR**

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the air bag diagnosis sensor unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Replace the main harness.

2. **CHECK AIR BAG DIAGNOSIS SENSOR UNIT**

Check the air bag diagnosis sensor unit. Refer to SRC-3, "Work Flow".

Is the inspection result normal?

YES  >> Replace the main harness.
NO   >> Replace parts whose air bag system has a malfunction.
ABS BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 2)]

ABS BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ABS actuator and electric unit (control unit) for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the resistance between the ABS actuator and electric unit (control unit) harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E26</td>
<td>26</td>
<td>15</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the ABS actuator and electric unit (control unit) branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ABS actuator and electric unit (control unit). Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the ABS actuator and electric unit (control unit). Refer to BRC-106, "Exploded View".

YES (Past error)>>Error was detected in the ABS actuator and electric unit (control unit) branch line.

NO >> Repair the power supply and the ground circuit.
TCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 2)]

TCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - TCM
   - Harness connector F1
   - Harness connector E3

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of TCM.
2. Check the resistance between the TCM harness connector terminals.

<table>
<thead>
<tr>
<th>TCM harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>F15</td>
<td>32</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the TCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to TM-120, "Wiring Diagram".

Is the inspection result normal?
YES (Present error)>>Replace the TCM. Refer to TM-162, "Exploded View".
YES (Past error)>>Error was detected in the TCM branch line.
NO >> Repair the power supply and the ground circuit.
IPDM-E BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 2)]

IPDM-E BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
YES (Past error)>>Error was detected in the IPDM E/R branch line.
NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Not existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>Not existed</td>
</tr>
<tr>
<td></td>
<td>14</td>
<td>Not existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

<table>
<thead>
<tr>
<th>ECM</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal No.</td>
<td></td>
</tr>
<tr>
<td>98</td>
<td>97</td>
</tr>
<tr>
<td>Approx. 108 – 132</td>
<td></td>
</tr>
</tbody>
</table>

3. Check the resistance between the IPDM E/R terminals.

<table>
<thead>
<tr>
<th>IPDM E/R</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal No.</td>
<td></td>
</tr>
<tr>
<td>40</td>
<td>39</td>
</tr>
<tr>
<td>Approx. 108 – 132</td>
<td></td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 5.
NO >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.

Revision: August 2012
6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   
   **NOTE:**
   
   ECM and IPDM E/R have a termination circuit. Check other units first.

4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
   
   **NOTE:**
   
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

**Inspection result**

Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
DTC/CIRCUIT DIAGNOSIS
MAIN LINE BETWEEN DLC AND HVAC CIRCUIT

Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>

YES (Past error)>>Error was detected in the main line between the air bag diagnosis sensor unit and the ABS actuator and electric unit (control unit).
NO   >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
ECM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Models without automatic drive positioner
     - ECM
     - Harness connector E30
     - Harness connector M1
   - Models with automatic drive positioner
     - ECM
     - Harness connector E29
     - Harness connector B10

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>ECM harness connector</th>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E10</td>
<td>98</td>
<td>97</td>
<td>Approx. 108 – 132</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".
YES (Past error)>>Error was detected in the ECM branch line.
NO >> Repair the power supply and the ground circuit.
BCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?
YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".
YES (Past error)>>Error was detected in the BCM branch line.
NO >> Repair the power supply and the ground circuit.

YES (Past error)>>Error was detected in the data link connector branch line circuit.
NO   >> Repair the data link connector branch line.
M&A BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

M&A BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the combination meter for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of combination meter.
2. Check the resistance between the combination meter harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".
YES (Past error)>>Error was detected in the combination meter branch line.
NO >> Repair the power supply and the ground circuit.

Revision: August 2012
AV BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the AV control unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of AV control unit.
2. Check the resistance between the AV control unit harness connector terminals.
   - Models without navigation system
   - Models with navigation system

<table>
<thead>
<tr>
<th>AV control unit harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>M156</td>
<td>86</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the AV control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the AV control unit. Refer to the following.

- Models with BOSE audio with color display: AV-232, "AV CONTROL UNIT : Diagnosis Procedure"
- Models with BOSE audio with color display with navigation system: AV-412, "AV CONTROL UNIT : Diagnosis Procedure"

Is the inspection result normal?

YES (Present error)>>Replace the AV control unit. Refer to the following.
   - Models with BOSE audio with color display: AV-322, "Removal and Installation"
   - Models with BOSE audio with color display with navigation system: AV-490, "Removal and Installation"

YES (Past error)>>Error was detected in the AV control unit branch line.
NO >> Repair the power supply and the ground circuit.
1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the A/C auto amp. for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of A/C auto amp.
2. Check the resistance between the A/C auto amp. harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>2</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the A/C auto amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.
• Models with color display: HAC-60, "A/C AUTO AMP : Diagnosis Procedure"
• Models with monochrome display: HAC-168, "A/C AUTO AMP: Diagnosis Procedure"

Is the inspection result normal?
YES (Present error)>> Replace the A/C auto amp. Refer to the following.
• Models with color display: HAC-104, "Removal and Installation"
• Models monochrome display: HAC-211, "Removal and Installation"
YES (Past error)>> Error was detected in the A/C auto amp. branch line.
NO >> Repair the power supply and the ground circuit.
**Diagnosis Procedure**

1. **CHECK CONNECTOR**

   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

   Is the inspection result normal?
   
   YES >> GO TO 2.
   
   NO >> Repair the terminal and connector.

2. **CHECK HARNESS FOR OPEN CIRCUIT**

   1. Disconnect the connector of steering angle sensor.
   2. Check the resistance between the steering angle sensor harness connector terminals.

   Is the measurement value within the specification?
   
   YES >> GO TO 3.
   
   NO >> Repair the steering angle sensor branch line.

3. **CHECK POWER SUPPLY AND GROUND CIRCUIT**

   Check the power supply and the ground circuit of the steering angle sensor. Refer to BRC-85, "Wiring Diagram".

   Is the inspection result normal?
   
   YES (Present error)>>Replace the steering angle sensor. Refer to BRC-109, "Removal and Installation".
   
   YES (Past error)>>Error was detected in the steering angle sensor branch line.
   
   NO >> Repair the power supply and the ground circuit.
A-BAG BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

A-BAG BRANCH LINE CIRCUIT

Diagnosis Procedure

WARNING:
Always observe the following items for preventing accidental activation.
• Before servicing, turn ignition switch OFF, disconnect battery negative terminal, and wait 3 minutes or more. (To discharge backup capacitor.)
• Never use unspecified tester or other measuring device.

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the air bag diagnosis sensor unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Replace the main harness.

2. CHECK AIR BAG DIAGNOSIS SENSOR UNIT

Check the air bag diagnosis sensor unit. Refer to SRC-3, "Work Flow".

Is the inspection result normal?

YES >> Replace the main harness.
NO >> Replace parts whose air bag system has a malfunction.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ABS actuator and electric unit (control unit) for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the resistance between the ABS actuator and electric unit (control unit) harness connector terminals.

<table>
<thead>
<tr>
<th>ABS actuator and electric unit (control unit) harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the ABS actuator and electric unit (control unit) branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ABS actuator and electric unit (control unit). Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?
YES (Present error)>>Replace the ABS actuator and electric unit (control unit). Refer to BRC-106, "Exploded View".
YES (Past error)>>Error was detected in the ABS actuator and electric unit (control unit) branch line.
NO >> Repair the power supply and the ground circuit.
1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - TCM
   - Harness connector F1
   - Harness connector E3

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of TCM.
2. Check the resistance between the TCM harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>F15</td>
<td>32</td>
<td>31</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the TCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to TM-120, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the TCM. Refer to TM-162, "Exploded View".
YES (Past error)>>Error was detected in the TCM branch line.
NO >> Repair the power supply and the ground circuit.
IPDM-E BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

IPDM-E BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E17</td>
<td>40</td>
<td>39</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
YES (Past error)>>Error was detected in the IPDM E/R branch line.
NO >> Repair the power supply and the ground circuit.
< DTC/CIRCUIT DIAGNOSIS >

CAN COMMUNICATION CIRCUIT

Diagnosis Procedure

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Ground</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
<td>Not existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

<table>
<thead>
<tr>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>98</td>
<td>Approx. 108 – 132</td>
</tr>
<tr>
<td>97</td>
<td></td>
</tr>
</tbody>
</table>

3. Check the resistance between the IPDM E/R terminals.

<table>
<thead>
<tr>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>40</td>
<td>Approx. 108 – 132</td>
</tr>
<tr>
<td>39</td>
<td></td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 5.
NO >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.
1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   NOTE:
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
   NOTE:
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

Inspection result
Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
DTC/CIRCUIT DIAGNOSIS

MAIN LINE BETWEEN ADP AND DLC CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector B1
   - Harness connector M6

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - Harness connectors B208 and B32
   - Harness connectors B1 and M6
2. Check the continuity between the harness connectors.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>B32</td>
<td>9</td>
<td>B1</td>
</tr>
<tr>
<td></td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?
YES >> GO TO 3.
NO >> Repair the main line between the harness connectors B32 and B1.

3. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

Check the continuity between the harness connector and the data link connector.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Data link connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M6</td>
<td>15J</td>
<td>M22</td>
</tr>
<tr>
<td></td>
<td>16J</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?
YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the driver seat control unit and the data link connector.
NO >> Repair the main line between the harness connector M6 and the data link connector.
Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>A/C auto amp. harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>M37</td>
</tr>
<tr>
<td></td>
<td>14</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the data link connector and the A/C auto amp.
NO >> Repair the main line between the data link connector and the A/C auto amp.
Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
4. Check the continuity between the harness connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>A/C auto amp. harness connector</th>
<th>Harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>M1</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the A/C auto amp. and the air bag diagnosis sensor unit.
NO >> Repair the main line between the A/C auto amp. and the air bag diagnosis sensor unit.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector M1
   - Harness connector E30

Is the inspection result normal?

YES >> GO TO 2.
NO  >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
2. Check the continuity between the A/C auto amp. harness connector and the harness connector.

<table>
<thead>
<tr>
<th>A/C auto amp. harness connector</th>

</tr>
</thead>
<tbody>
<tr>
<td>E30</td>
<td>15G</td>
<td>E26</td>
</tr>
<tr>
<td>8G</td>
<td>15</td>
<td>Existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the air bag diagnosis sensor unit and the ABS actuator and electric unit (control unit).
NO  >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
ECM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR
   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
      - Models without automatic drive positioner
        • ECM
        • Harness connector E30
        • Harness connector M1
      - Models with automatic drive positioner
        • ECM
        • Harness connector E29
        • Harness connector B10
   Is the inspection result normal?
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT
   1. Disconnect the connector of ECM.
   2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E10</td>
<td>98</td>
<td>97</td>
</tr>
</tbody>
</table>

   Is the measurement value within the specification?
   YES >> GO TO 3.
   NO >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT
   Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".
   Is the inspection result normal?
   YES (Present error)>>Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".
   YES (Past error)>>Error was detected in the ECM branch line.
   NO >> Repair the power supply and the ground circuit.
ADP BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Driver seat control unit
   - Harness connector B208
   - Harness connector B32

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of driver seat control unit.
2. Check the resistance between the driver seat control unit harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>B203</td>
<td>16</td>
<td>32</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the driver seat control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the driver seat control unit. Refer to ADP-48, "DRIVER SEAT CONTROL UNIT : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the driver seat control unit. Refer to ADP-171, "Removal and Installation".
YES (Past error)>>Error was detected in the driver seat control unit branch line.
NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

<table>
<thead>
<tr>
<th>BCM harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>M19</td>
<td>79</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".
YES (Past error)>>Error was detected in the BCM branch line.
NO >> Repair the power supply and the ground circuit.
DLC BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the data link connector for damage, bend and loose connection (connector side and harness side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check the resistance between the data link connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
</tbody>
</table>

Approx. 54 – 66

Is the measurement value within the specification?
YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the data link connector branch line circuit.
NO >> Repair the data link connector branch line.
M&A BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the combination meter for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.

NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of combination meter.
2. Check the resistance between the combination meter harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.

NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".

YES (Past error)>>Error was detected in the combination meter branch line.

NO >> Repair the power supply and the ground circuit.
AV BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the AV control unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of AV control unit.
2. Check the resistance between the AV control unit harness connector terminals.

- Models without navigation system

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M156</td>
<td>86</td>
<td>87</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the AV control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the AV control unit. Refer to the following.
- Models with BOSE audio with color display: AV-232, "AV CONTROL UNIT : Diagnosis Procedure"
- Models with BOSE audio with color display with navigation system: AV-412, "AV CONTROL UNIT : Diagnosis Procedure"

Is the inspection result normal?

YES (Present error)>>Replace the AV control unit. Refer to the following.
  - Models with BOSE audio with color display: AV-322, "Removal and Installation"
  - Models with BOSE audio with color display with navigation system: AV-490, "Removal and Installation"

YES (Past error)>>Error was detected in the AV control unit branch line.
NO >> Repair the power supply and the ground circuit.

AV control unit harness connector

</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the AV control unit branch line.
HVAC BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the A/C auto amp. for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of A/C auto amp.
2. Check the resistance between the A/C auto amp. harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>

<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the A/C auto amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.

• Models with color display: HAC-60, "A/C AUTO AMP: Diagnosis Procedure"
• Models with monochrome display: HAC-168, "A/C AUTO AMP: Diagnosis Procedure"

Is the inspection result normal?

YES (Present error) >> Replace the A/C auto amp. Refer to the following.

• Models with color display: HAC-104, "Removal and Installation"
• Models monochrome display: HAC-211, "Removal and Installation"

YES (Past error) >> Error was detected in the A/C auto amp. branch line.
NO >> Repair the power supply and the ground circuit.
< DTC/CIRCUIT DIAGNOSIS >

STRG BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES  >> GO TO 2.
NO    >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of steering angle sensor.
2. Check the resistance between the steering angle sensor harness connector terminals.

Is the measurement value within the specification?

YES  >> GO TO 3.
NO    >> Repair the steering angle sensor branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the steering angle sensor. Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the steering angle sensor. Refer to BRC-109, "Removal and Installation".
YES (Past error)>>Error was detected in the steering angle sensor branch line.
NO    >> Repair the power supply and the ground circuit.

</tbody>
</table>
WARNING:
Always observe the following items for preventing accidental activation.
• Before servicing, turn ignition switch OFF, disconnect battery negative terminal, and wait 3 minutes or more. (To discharge backup capacitor.)
• Never use unspecified tester or other measuring device.

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the air bag diagnosis sensor unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES  >> GO TO 2.
NO   >> Replace the main harness.

2. CHECK AIR BAG DIAGNOSIS SENSOR UNIT

Check the air bag diagnosis sensor unit. Refer to SRC-3, "Work Flow".
Is the inspection result normal?
YES  >> Replace the main harness.
NO   >> Replace parts whose air bag system has a malfunction.
ABS BRANCH LINE CIRCUIT

 Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ABS actuator and electric unit (control unit) for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the resistance between the ABS actuator and electric unit (control unit) harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the ABS actuator and electric unit (control unit) branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ABS actuator and electric unit (control unit). Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the ABS actuator and electric unit (control unit). Refer to BRC-106, "Exploded View".
YES (Past error)>>Error was detected in the ABS actuator and electric unit (control unit) branch line.
NO >> Repair the power supply and the ground circuit.

TCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >  [CAN SYSTEM (TYPE 4)]

TCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - TCM
   - Harness connector F1
   - Harness connector E3

Is the inspection result normal?
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of TCM.
2. Check the resistance between the TCM harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>F15</td>
<td>32</td>
<td>31</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
   YES >> GO TO 3.
   NO >> Repair the TCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to TM-120, "Wiring Diagram".

Is the inspection result normal?
   YES (Present error)>>Replace the TCM. Refer to TM-162, "Exploded View".
   YES (Past error)>>Error was detected in the TCM branch line.
   NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E17</td>
<td>40</td>
<td>39</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
YES (Past error)>>Error was detected in the IPDM E/R branch line.
NO >> Repair the power supply and the ground circuit.
CAN COMMUNICATION CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

CAN COMMUNICATION CIRCUIT

Diagnosis Procedure

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>M22</td>
<td>6</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>Ground</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
<td></td>
</tr>
<tr>
<td>M22</td>
<td>6</td>
<td>Not existed</td>
</tr>
<tr>
<td></td>
<td>14</td>
<td>Not existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

<table>
<thead>
<tr>
<th>ECM</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal No.</td>
<td></td>
</tr>
<tr>
<td>98</td>
<td>97</td>
</tr>
</tbody>
</table>

3. Check the resistance between the IPDM E/R terminals.

<table>
<thead>
<tr>
<th>IPDM E/R</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terminal No.</td>
<td></td>
</tr>
<tr>
<td>40</td>
<td>39</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 5.
NO >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.

Revision: August 2012

LAN-121

2012 Maxima
6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   **NOTE:**
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
   **NOTE:**
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

**Inspection result**
Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
DTC/CIRCUIT DIAGNOSIS

MAIN LINE BETWEEN DLC AND HVAC CIRCUIT

Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>A/C auto amp. harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>M37</td>
</tr>
<tr>
<td></td>
<td>14</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?
YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the data link connector and the A/C auto amp.
NO   >> Repair the main line between the data link connector and the A/C auto amp.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector M1
   - Harness connector E30

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
2. Check the continuity between the A/C auto amp. harness connector and the harness connector.

<table>
<thead>
<tr>
<th>A/C auto amp. harness connector</th>
<th>Harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>M1</td>
</tr>
<tr>
<td>2</td>
<td>8G</td>
<td>Existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES  >> GO TO 3.
NO   >> Repair the main line between the A/C auto amp. and the harness connector M1.

3. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the continuity between the harness connector and the ABS actuator and electric unit (control unit) harness connector.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>ABS actuator and electric unit (control unit) harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>E30</td>
<td>15G</td>
<td>E26</td>
</tr>
<tr>
<td>8G</td>
<td>15</td>
<td>Existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>> Check CAN system type decision again.
YES (Past error)>> Error was detected in the main line between the A/C auto amp. and the ABS actuator and electric unit (control unit).
NO   >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Models without automatic drive positioner
     • ECM
     • Harness connector E30
     • Harness connector M1
   - Models with automatic drive positioner
     • ECM
     • Harness connector E29
     • Harness connector B10

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>ECM harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>E10</td>
<td>98</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".

Is the inspection result normal?
YES (Present error)>>Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".
YES (Past error)>>Error was detected in the ECM branch line.
NO >> Repair the power supply and the ground circuit.
BCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 5)]

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".
YES (Past error)>>Error was detected in the BCM branch line.
NO >> Repair the power supply and the ground circuit.

<table>
<thead>
<tr>
<th>BCM harness connector</th>

Is the measurement value within the specification?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the data link connector branch line circuit.
NO  >> Repair the data link connector branch line.
M&A BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the combination meter for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of combination meter.
2. Check the resistance between the combination meter harness connector terminals.

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?
YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".
YES (Past error)>>Error was detected in the combination meter branch line.
NO >> Repair the power supply and the ground circuit.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the A/C auto amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.

- Models with color display: HAC-60, "A/C AUTO AMP : Diagnosis Procedure"
- Models with monochrome display: HAC-168, "A/C AUTO AMP : Diagnosis Procedure"

Is the inspection result normal?

YES (Present error)>>Replace the A/C auto amp. Refer to the following.
- Models with color display: HAC-104, "Removal and Installation"
- Models monochrome display: HAC-211, "Removal and Installation"

YES (Past error)>>Error was detected in the A/C auto amp. branch line.
NO >> Repair the power supply and the ground circuit.
STRG BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of steering angle sensor.
2. Check the resistance between the steering angle sensor harness connector terminals.

Is the measurement value within the specification?
YES  >> GO TO 3.
NO   >> Repair the steering angle sensor branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the steering angle sensor. Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?
YES (Present error)>> Replace the steering angle sensor. Refer to BRC-109, "Removal and Installation".
YES (Past error)>> Error was detected in the steering angle sensor branch line.
NO    >> Repair the power supply and the ground circuit.
ABS BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 5)]

ABS BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ABS actuator and electric unit (control unit) for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the resistance between the ABS actuator and electric unit (control unit) harness connector terminals.

Is the measurement value within the specification?

YES  >> GO TO 3.
NO   >> Repair the ABS actuator and electric unit (control unit) branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ABS actuator and electric unit (control unit). Refer to BRC-85, "Wiring Diagram".

Is the inspection result normal?

YES (Present error)>>Replace the ABS actuator and electric unit (control unit). Refer to BRC-106, "Exploded View".
YES (Past error)>>Error was detected in the ABS actuator and electric unit (control unit) branch line.
NO   >> Repair the power supply and the ground circuit.
TCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >  [CAN SYSTEM (TYPE 5)]

TCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - TCM
   - Harness connector F1
   - Harness connector E3

Is the inspection result normal?
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of TCM.
2. Check the resistance between the TCM harness connector terminals.

<table>
<thead>
<tr>
<th>TCM harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>F15</td>
<td>32</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
   YES >> GO TO 3.
   NO >> Repair the TCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to TM-120, "Wiring Diagram".

Is the inspection result normal?
   YES (Present error)>>Replace the TCM. Refer to TM-162, "Exploded View".
   YES (Past error)>>Error was detected in the TCM branch line.
   NO >> Repair the power supply and the ground circuit.
IPDM-E BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

**IPDM-E BRANCH LINE CIRCUIT**

**Diagnosis Procedure**

1. **CHECK CONNECTOR**
   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

   Is the inspection result normal?
   - YES >> GO TO 2.
   - NO >> Repair the terminal and connector.

2. **CHECK HARNESS FOR OPEN CIRCUIT**
   1. Disconnect the connector of IPDM E/R.
   2. Check the resistance between the IPDM E/R harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>

<td>40</td>
<td>39</td>
</tr>
</tbody>
</table>

   Is the measurement value within the specification?
   - YES >> GO TO 3.
   - NO >> Repair the IPDM E/R branch line.

3. **CHECK POWER SUPPLY AND GROUND CIRCUIT**
   Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

   Is the inspection result normal?
   - YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
   - YES (Past error)>>Error was detected in the IPDM E/R branch line.
   - NO >> Repair the power supply and the ground circuit.

Revision: August 2012

LAN-133

2012 Maxima
Diagnosis Procedure

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Ground</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
<td>Not existed</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Not existed</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

<table>
<thead>
<tr>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>98</td>
<td>97</td>
</tr>
</tbody>
</table>

3. Check the resistance between the IPDM E/R terminals.

<table>
<thead>
<tr>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>40</td>
<td>39</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 5.
NO >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
Inspection result
Reproduced>>GO TO 6.
Non-reproduced>>Start the diagnosis again. Follow the trouble diagnosis procedure when past error is detected.

6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.
1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   NOTE:
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
   NOTE:
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

Inspection result
Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
**MAIN LINE BETWEEN ADP AND DLC CIRCUIT**

< DTC/CIRCUIT DIAGNOSIS >

**DTC/CIRCUIT DIAGNOSIS**

**MAIN LINE BETWEEN ADP AND DLC CIRCUIT**

Diagnosis Procedure

1. **CHECK CONNECTOR**

   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
      - Harness connector B1
      - Harness connector M6

   Is the inspection result normal?
   
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. **CHECK HARNESS CONTINUITY (OPEN CIRCUIT)**

   1. Disconnect the following harness connectors.
      - Harness connectors B208 and B32
      - Harness connectors B1 and M6
   2. Check the continuity between the harness connectors.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>B32</td>
<td>9</td>
<td>B1</td>
</tr>
<tr>
<td></td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>

   Is the inspection result normal?
   
   YES >> GO TO 3.
   NO >> Repair the main line between the harness connectors B32 and B1.

3. **CHECK HARNESS CONTINUITY (OPEN CIRCUIT)**

   Check the continuity between the harness connector and the data link connector.

<table>
<thead>
<tr>
<th>Harness connector</th>
<th>Data link connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M6</td>
<td>15J</td>
<td>M22</td>
</tr>
<tr>
<td></td>
<td>16J</td>
<td></td>
</tr>
</tbody>
</table>

   Is the inspection result normal?
   
   YES (Present error)>>Check CAN system type decision again.
   YES (Past error)>>Error was detected in the main line between the driver seat control unit and the data link connector.
   NO >> Repair the main line between the harness connector M6 and the data link connector.
Diagnosis Procedure

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
   - ECM
   - A/C auto amp.
4. Check the continuity between the data link connector and the A/C auto amp. harness connector.

<table>
<thead>
<tr>
<th>Data link connector</th>
<th>A/C auto amp. harness connector</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>M37</td>
</tr>
<tr>
<td></td>
<td>14</td>
<td></td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the main line between the data link connector and the A/C auto amp.
NO  >> Repair the main line between the data link connector and the A/C auto amp.
Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).
   - Harness connector M1
   - Harness connector E30

   Is the inspection result normal?
   
   YES >> GO TO 2.
   NO >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the following harness connectors.
   - A/C auto amp.
   - Harness connectors M1 and E30
2. Check the continuity between the A/C auto amp. harness connector and the harness connector.

<table>
<thead>
<tr>
<th>A/C auto amp. harness connector</th>

<tr>
<td></td>
<td>8G</td>
<td></td>
</tr>
</tbody>
</table>

   Is the inspection result normal?
   
   YES (Present error)>>Check CAN system type decision again.
   YES (Past error)>>Error was detected in the main line between the A/C auto amp. and the ABS actuator and electric unit (control unit).
   NO >> Repair the main line between the harness connector E30 and the ABS actuator and electric unit (control unit).
ECM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 6)]

ECM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Models without automatic drive positioner
     • ECM
     • Harness connector E30
     • Harness connector M1
   - Models with automatic drive positioner
     • ECM
     • Harness connector E29
     • Harness connector B10

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E10</td>
<td>98</td>
<td>97</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-155, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the ECM. Refer to EC-17, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".
YES (Past error)>>Error was detected in the ECM branch line.
NO >> Repair the power supply and the ground circuit.
ADP BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

ADP BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).
   - Driver seat control unit
   - Harness connector B208
   - Harness connector B32

Is the inspection result normal?

YES  >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of driver seat control unit.
2. Check the resistance between the driver seat control unit harness connector terminals.

<table>
<thead>
<tr>
<th>Driver seat control unit harness connector</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector No.</td>
<td>Terminal No.</td>
</tr>
<tr>
<td>B203</td>
<td>16  32</td>
</tr>
</tbody>
</table>

Approx. 54 – 66

Is the measurement value within the specification?

YES  >> GO TO 3.
NO   >> Repair the driver seat control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the driver seat control unit. Refer to ADP-48, "DRIVER SEAT CONTROL UNIT : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the driver seat control unit. Refer to ADP-171, "Removal and Installation".
YES (Past error)>>Error was detected in the driver seat control unit branch line.
NO   >> Repair the power supply and the ground circuit.
BCM BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

[CAN SYSTEM (TYPE 6)]

BCM BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-36, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the BCM. Refer to BCS-80, "Removal and Installation".
YES (Past error)>>Error was detected in the BCM branch line.
NO >> Repair the power supply and the ground circuit.

<tr>
<td></td>
<td></td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES (Present error)>>Check CAN system type decision again.
YES (Past error)>>Error was detected in the data link connector branch line circuit.
NO   >> Repair the data link connector branch line.
M&A BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the combination meter for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of combination meter.
2. Check the resistance between the combination meter harness connector terminals.

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the combination meter branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the combination meter. Refer to MWI-37, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the combination meter. Refer to MWI-121, "Removal and Installation".
YES (Past error)>>Error was detected in the combination meter branch line.
NO >> Repair the power supply and the ground circuit.
AV BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the AV control unit for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?
YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of AV control unit.
2. Check the resistance between the AV control unit harness connector terminals.

- Models without navigation system

   AV control unit harness connector
<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M156</td>
<td>86</td>
<td>87</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?
YES >> GO TO 3.
NO >> Repair the AV control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the AV control unit. Refer to the following.
• Models with BOSE audio with color display: AV-232, "AV CONTROL UNIT : Diagnosis Procedure"
• Models with BOSE audio with color display with navigation system: AV-412, "AV CONTROL UNIT : Diagnosis Procedure"

Is the inspection result normal?
YES (Present error)>>Replace the AV control unit. Refer to the following.
  • Models with BOSE audio with color display: AV-322, "Removal and Installation"
  • Models with BOSE audio with color display with navigation system: AV-490, "Removal and Installation"

YES (Past error)>>Error was detected in the AV control unit branch line.
NO >> Repair the power supply and the ground circuit.
HVAC BRANCH LINE CIRCUIT

< DTC/CIRCUIT DIAGNOSIS >

HVAC BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the A/C auto amp. for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of A/C auto amp.
2. Check the resistance between the A/C auto amp. harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>M37</td>
<td>1</td>
<td>Approx. 54 – 66</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the A/C auto amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the A/C auto amp. Refer to the following.

• Models with color display: HAC-60, "A/C AUTO AMP : Diagnosis Procedure"
• Models with monochrome display: HAC-168, "A/C AUTO AMP : Diagnosis Procedure"

Is the inspection result normal?

YES (Present error)>> Replace the A/C auto amp. Refer to the following.
• Models with color display: HAC-104, "Removal and Installation"
• Models monochrome display: HAC-211, "Removal and Installation"

YES (Past error)>> Error was detected in the A/C auto amp. branch line.
NO >> Repair the power supply and the ground circuit.
< DTC/CIRCUIT DIAGNOSIS >  

## STRG BRANCH LINE CIRCUIT

**Diagnosis Procedure**

1. **CHECK CONNECTOR**
   
   1. Turn the ignition switch OFF.
   2. Disconnect the battery cable from the negative terminal.
   3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

   **Is the inspection result normal?**
   
   ***YES*** >> GO TO 2.
   
   ***NO*** >> Repair the terminal and connector.

2. **CHECK HARNESS FOR OPEN CIRCUIT**
   
   1. Disconnect the connector of steering angle sensor.
   2. Check the resistance between the steering angle sensor harness connector terminals.

   **Is the measurement value within the specification?**
   
   ***YES*** >> GO TO 3.
   
   ***NO*** >> Repair the steering angle sensor branch line.

3. **CHECK POWER SUPPLY AND GROUND CIRCUIT**
   
   Check the power supply and the ground circuit of the steering angle sensor. Refer to [BRC-85, "Wiring Diagram"](#).

   **Is the inspection result normal?**
   
   ***YES (Present error)>>*** Replace the steering angle sensor. Refer to [BRC-109, "Removal and Installation"](#).
   
   ***YES (Past error)>>*** Error was detected in the steering angle sensor branch line.
   
   ***NO*** >> Repair the power supply and the ground circuit.

Revision: August 2012

LAN-148

2012 Maxima
IPDM-E BRANCH LINE CIRCUIT

Diagnosis Procedure

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the IPDM E/R for damage, bend and loose connection (unit side and connector side).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E17</td>
<td>40</td>
<td>39</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 3.
NO >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PCS-18, "Diagnosis Procedure".

Is the inspection result normal?

YES (Present error)>>Replace the IPDM E/R. Refer to PCS-35, "Removal and Installation".
YES (Past error)>>Error was detected in the IPDM E/R branch line.
NO >> Repair the power supply and the ground circuit.
Diagnosis Procedure

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

Is the inspection result normal?

YES >> GO TO 2.
NO   >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 3.
NO   >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

<table>
<thead>
<tr>
<th>Connector No.</th>
<th>Terminal No.</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M22</td>
<td>6</td>
<td>14</td>
</tr>
</tbody>
</table>

Is the inspection result normal?

YES >> GO TO 4.
NO   >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

<table>
<thead>
<tr>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>98</td>
<td>97</td>
</tr>
<tr>
<td></td>
<td>Approx. 108 – 132</td>
</tr>
</tbody>
</table>

3. Check the resistance between the IPDM E/R terminals.

<table>
<thead>
<tr>
<th>Terminal No.</th>
<th>Resistance (Ω)</th>
</tr>
</thead>
<tbody>
<tr>
<td>40</td>
<td>39</td>
</tr>
<tr>
<td></td>
<td>Approx. 108 – 132</td>
</tr>
</tbody>
</table>

Is the measurement value within the specification?

YES >> GO TO 5.
NO   >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.
   
   **NOTE:**
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.
   
   **NOTE:**
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

**Inspection result**

Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.
